

Hospital Analytics & Intelligence

From Operational Scorekeeping to Strategic Forecasting:

Capital Pulse uses advanced predictive modeling to transform real-time claims data into precise, accurate forecasts for cash flow prediction.

Eliminating Payer Information Asymmetry:

Our AI-driven simulations and analytics uncover hidden processing delays, unusual denial patterns, and systematic underpayments to help level the playing field.

Highly Accurate Claim Driven Valuation:

We model all forms of payer underperformance to give you the most accurate picture of what will actually come in the door from your specific payers. You get a clean view of not just projected cash flow, but a detailed understanding of how your payers behave.

Agile “What-If” Scenario Modeling:

Capital Pulse answers sophisticated “what-if” questions through realistic scenarios. Denial rate changes; time-to-payment extensions; and shifting service & payer mixes can all be modeled and planned for, instead of just reacted to.

The Executive Command Center:

Real-time monitoring of critical KPIs, including clean claim rates, days in accounts receivable (DAR), and payment probabilities. Schedule a free demo today!
