Healthcare Provider Financing

Unlocking Immediate, Predictable Liquidity:

Providers can instantly increase their days cash on hand (DCOH) by converting outstanding medical claims into active working capital within 24-48 hours.

Operational Resilience Against System Shocks:

By accessing bank-provided financing, providers can establish a vital financial backstop against centralized payment failures and devastating cyberattacks.

Lowering Borrowing Costs to Below Prime Rates:

Capital Pulse's real-time valuation allows our banking partners to price financing based on the creditworthiness of the payer rather than the provider, lowering costs to SOFR+ instead of Prime Rate or higher.

True Non-Recourse Asset Sale Structure:

Capital Pulse monetizes receivables directly through an off-balance-sheet, true sale structure, ensuring no new debt and avoiding conflicts with existing lender agreements.

Seamless, Invisible Workflow Integration:

The Capital Pulse platform operates as an invisible technological layer alongside your existing Revenue Cycle Management (RCM) software, with zero disruption to your daily billing processes and no required staff retraining.
